

Gloss Meter

Horiba IG-320

- ✧ A must have for most new construction and retail work - gloss measurements are required in many specifications
- ✧ Lightweight, compact body makes the unit easily transportable
- ✧ Provides real-time numerical displays of gloss levels using only the sample measurement
- ✧ Detects even the lowest levels of gloss
- ✧ No warm-up, one-touch test readings
- ✧ Measurement angle from 20 degrees to 60 degrees
- ✧ Battery life of 15+ hours

Simple to Use:

- To calibrate for first use, attach black calibrating plate to the gloss meter and hit the "ON" button.
- Remove the calibrating plate.
- Place the gloss meter on the floor to measure gloss level.
- Hit the "DATA IN" button to save each measurement.
- Take multiple readings across the floor.
- Calculate "AVERAGE" for the overall gloss reading.

Technical Data

Item Number:	SAS.METER01
Price:	Call for Quote
Measurement Area:	12x6mm oval
Measurement Range:	0mm - 100.0mm
Display Range:	0mm - 199.9mm
Continual Use Time:	15+ hours
